### IMPORTANT INFORMATION RELATING TO PEST CONTROL TREATMENT AT YOUR PROPERTY

It is imperative that no other person involves themselves with the pest treatment once started. This includes sealing pest entrance holes, movement of equipment or additional DIY products. If interference is suspected, it may lead to failure of the treatment and extra charges to yourself.

#### Information relating to rodent treatment;

- Prevent access to the rodenticide by all persons, especially children and pets.
- Avoid all contact by mouth. If you have any concerns, consult your doctor and take this letter and your copy of the inspection/treatment report with you.
- Do not allow rodenticide to contaminate food or food preparation surfaces.
- Do not move baits or bait boxes, unless there is an urgent reason to do so.
- Should you find any dead rodents, telephone us.
- Our technician must be allowed to remove all equipment and pesticides at the end of treatment.

#### Information relating to insect treatment;

- Where liquid sprays are used, keep unprotected persons, children, pets and animals away from the area until surfaces are dry.
- FISH are particularly at risk from insecticides, therefore please ensure that they are either kept away from the area being treated, or in the case of fish ponds are protected by covering the pond.
- Clean any food preparation areas properly with water and detergent before use.
- Insect activity may continue for a few days following treatment. This is normal, please be patient. Do not vacuum, sweep or dust any surfaces that have been directly treated for as long as possible.

#### Information relating to wasp/bee treatment;

- Please keep unprotected people, children, pets and animals away from the treated area.
- Wasp/bee activity may continue for up to 3 days after treatment. If there is still activity, please call us.
- Following and during treatment ensure that your doors and windows are kept closed in the vicinity of the nest (warn your close neighbours as well). For a time after treatment there may be increased activity around the nest.
- FISH are particularly at risk from this treatment please keep fish away or covered.
- Stay clear of the nest site for up to three days after treatment.
- Dead wasps/bees can still sting! Sweep up or vacuum carefully and dispose of safely.

#### Information relating to traps;

Traps by their very nature can cause serious harm and injury if tampered with. While every precaution is taken to enclose the trap safely, ATLAS ENVIRONMENTAL SOLUTIONS LTD cannot be held responsible for any injury caused if equipment is tampered with.

#### Accidental poisoning of humans;

- Remove all persons from the contaminated area and consult a doctor/ambulance immediately.
- Remove any contaminated clothing and thoroughly wash affected skin with soap and water.
- If swallowed (ingested) DO NOT INDUCE VOMITING, wash mouth out with clean water.
- If eyes are contaminated wash with clean water for at least ten minutes.
- Loosen all tight clothing especially around the neck.
- Keep casualty warm and quiet, place in the recovery position if trained to do so.
- Take a copy of this letter along with your copy of the inspection/treatment report to the hospital, this may aid diagnosis.
- Do not leave the person alone.

#### Accidental poisoning of animals;

- Please consult a veterinary surgeon immediately, have this letter and your copy of the inspection/treatment report available and provide information as required.
